# Rectangular VAV and CAV air volume control units

**Technical data**  
**Single wall (NK.....)**  
**Double wall (NL.....)**

## Application

Types NK and NL are rectangular pressure-independent VAV and CAV air volume control terminals.

The units are designed particularly for systems with larger air volumes and duct sizes and for the accurate measurement and control of air volumes courtesy of the patented airflow sensor type Flo-Cross®.

In CAV application, the unit maintains the required constant airflow independent to the inlet static pressure.

In VAV application, the unit controls the air volume to the room, depending on the cooling load required thus saving energy consumption in both cooling and heating applications.

The VAV or CAV units can be used either for supply or return air applications in new or refurbishment projects.

The units do have a single wall (NK) or double wall (NL) construction and can optionally be supplied with an additional sound attenuator and a plenum with built-in electric reheat coil.

## Features:

- Pressure independent control functions.
- Compact design.
- Volume control range 100% down to 10%
- Low pressure loss over the unit.
- Single or double wall construction.
- Factory fitted additional attenuator and/or plenum with built-in electric reheat coil.
- Multi-leaf damper blade; full shut-off optional.
- Low noise production.
- Suitable for large air volumes.
- Suitable for all control functions (VAV, CAV, shut-off, etc.) to maximise system energy savings.
- Flo-Cross® 2x12 points averaging and signal amplifying airflow sensor, better than 2,5% accuracy even with irregular duct approach.
- Maintenance free.

## Technical information

### Casing:

Single or double wall, air-tight construction made of galvanized sheet steel; casing leakage rate to Class II VDI 3803 / DIN 24 194. 30 mm flange connections at the in- and outlet. In case of double wall construction 25 mm insulation material is used completely enclosed by the double wall construction.

### Insulation:

The unit is supplied with 25 mm thermal and acoustical insulation (30 kg/m<sup>3</sup>) complying to: NFPA90A and 90B surface burning characteristics, BS476 part 6 and 7 fire propagation and class 0 surface spread of flame.

### Damper:

Damper blades: aluminium, aerofoil 50-mm opposed blade construction with external linkage.

Blades are optional provided with neoprene gasket for full shut-off function.

Damper shaft: steel, ø10 mm rotating in self lubricating Nylon bearings.

### Flo-Cross®:

Extruded aluminium construction with nylon core + feet.

### Sound attenuator:

Constructed from galvanized sheet steel, internal acoustic insulation tested to Class 'O' fire regulation, erosion proof up to 30 m/s. Special version insulation for hospital application on request.

### Reheat coil:

Choice of electric reheat coil 230VAC/1-phase or 400VAC/3-phase.  
Coils are fitted in plenum made of galvanised sheet steel with 13mm internal isolation, type fireflex S305 (30 kg/m<sup>3</sup>). More detailed technical information can be found in part NO of the catalogue.

### Controls:

Suitable for use with pneumatic, analogue electronic or DDC controllers. Controls can be factory fitted, wired and calibrated. Controls enclosure (galvanised sheet steel) can be provided optionally.

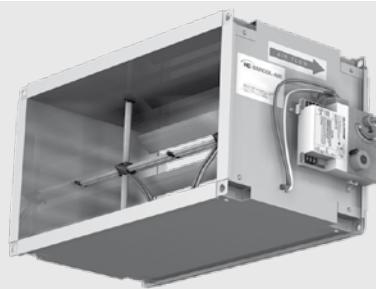

## Delivery format

### Delivery format:

- The VAV or CAV unit will be supplied as a single mounting assembly. Optional ordered distribution plenum, reheat coil and/or controls are factory fitted, wired and calibrated. The on site delivered unit is ready to be installed and commissioned.
- Controls location and hot water or electric connections are as a standard fitted on the right hand side of the unit when looking in the direction of the airflow.
- On request, the unit can be delivered with connections on the left hand side.
- When units are ordered with controls, these will be factory fitted, wired and calibrated upon request.
- When units are ordered with 'free-issue' controls by others, wiring diagrams and mounting instructions must be provided.

## Specify as:

### Example:

Supply and install, variable air volume units, double-wall construction with sound attenuator with rectangular outlet, constructed from galvanized sheet steel. The casing leakage rate shall be classified according to class II, VDI 3803/DIN 24 194 and the duct-sleeve connections shall be 30 mm flange type. The VAV units shall have a multi-leaf opposed blade damper with steel damper shaft rotating in self lubricating Nylon bearings. A centre averaging airflow sensor with at least 2 x 12 test points and amplified signal air flow sensor, type Flo-Cross® shall control the airflow with an accuracy not less than 2.5 %. The VAV unit shall be supplied with an additional sound attenuator made of galvanised sheet steel and internal isolation according to class 'O' fir regulation. The controller shall be I/A Series, LON® compatible, DDC controller type MNL-V2RVx or BACnet® compatible type MNB-V2. Controls must be factory fitted, wired and calibrated according to the following requirements.

Maximum air volume 1280 l/s  
Minimum air volume 512 l/s  
Unit size 400 x 400 mm  
Max. pressure loss 38 Pa  
Max. discharge sound index < NC35 (@250Pa Δp)  
Max. radiated sound index < NC35 (@250Pa Δp)

Ordering example: type – model – handing =  
NLODOOB – 0400 - 0400

Manufacturer: HC Barcol-Air

## Installation Instructions:

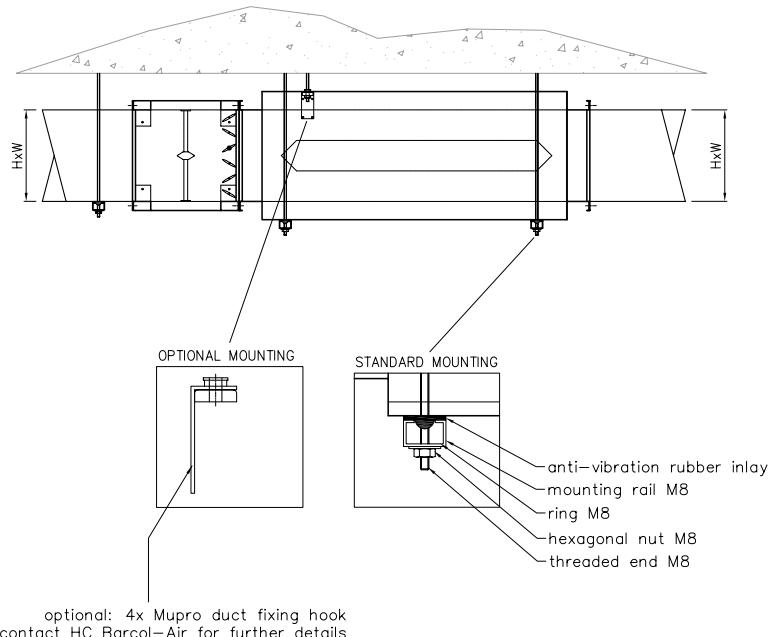

The HC Barcol-Air VAV terminals shall be installed using at least two support brackets (DIN-rail or L-profile), with anti-vibration rubber under the terminal. Each of these brackets shall be fixed with two threaded rods to the ceiling slab above.

This installation method:

- 1 Shall prevent the body of the VAV terminal from high mechanical tension, which could damage the construction and performance of the terminal.
- 2 Shall prevent torsion on the VAV terminals, which could cause malfunction of the damper blades.
- 3 Provides some flexibility to the final location of the VAV terminals.
- 4 Use at least 1x diagonal straight duct length before the VAV inlet.

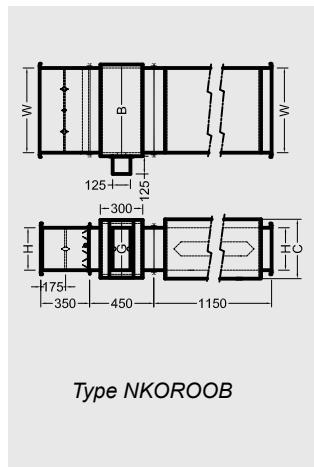

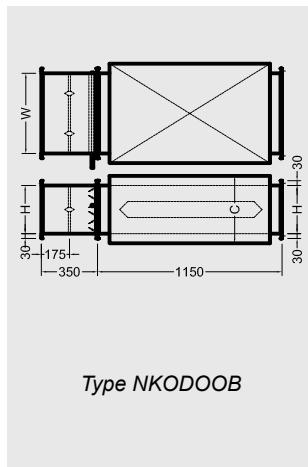

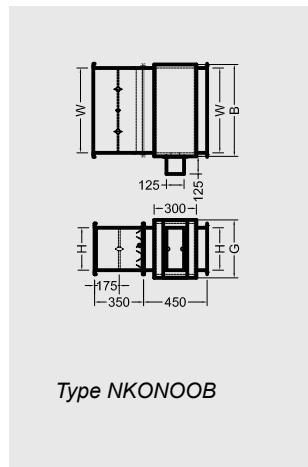

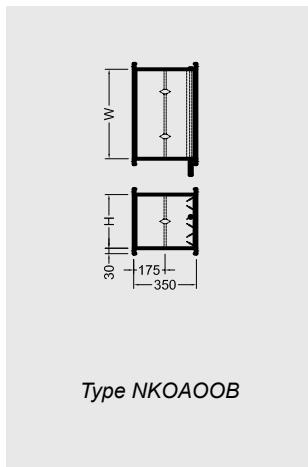

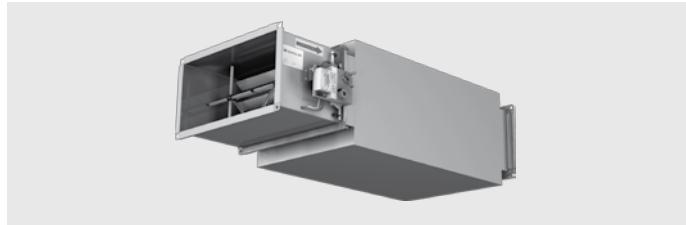

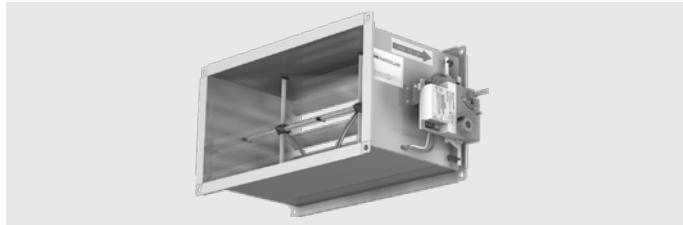

- 5 Additional manual volume control dampers (VCD's) before the inlet are not required / recommended!!
- 6 All connections shall be thermally isolated.
- 7 Pressure sensing tubes of FloCross airflow sensor shall not be "kinked" or otherwise obstructed by the external duct insulation.

Optional 4 x Mupro fixing hooks can be used (see drawing).

1. Sound data is determined in a reverberation room at an independent sound laboratory, according to ISO 3741 and ISO 5135 standards.
2. L<sub>w</sub> in dB/Oct. (re 1pW) are sound power levels for discharge sound and case radiated sound. Figures less than 17 dB are indicated by "-".
3. The discharge sound pressure levels are determined with the assumptions as referred to in table 1 for downstream ductwork including a diffuser with insulated plenum box.
4. The radiated sound pressure levels are determined

with the assumptions as referred to in table 1 for ceiling plenum and suspended ceiling absorption.

5. L<sub>p</sub> values are including a room absorption of 10 dB/Oct.

6. dB(A), NC and NR index figures are sound pressure levels. Figures less than 20 are indicated by "-".

7.  $\Delta p$  is static pressure drop across VAV air volume control unit with damper fully open.

8. For non standard applications and/or selections, please contact our technical staff.

Table 1: Assumptions for additional attenuation.

| Hz             | 125 | 250 | 500 | 1000 | 2000 | 4000 |
|----------------|-----|-----|-----|------|------|------|
| Discharge (dB) | 5   | 10  | 20  | 30   | 30   | 25   |
| Radiated (dB)  | 2   | 5   | 10  | 15   | 15   | 20   |

1. Sound data is determined in a reverberation room at an independent sound laboratory, according to ISO 3741 and ISO 5135 standards.
2. L<sub>w</sub> in dB/Oct. (re 1pW) are sound power levels for discharge sound and case radiated sound. Figures less than 17 dB are indicated by “-”.
3. The discharge sound pressure levels are determined with the assumptions as referred to in table 1 for downstream ductwork including a diffuser with insulated plenum box.
4. The radiated sound pressure levels are determined with the assumptions as referred to in table 1 for an independent sound laboratory, according to ISO 3741 and ISO 5135 standards.

with the assumptions as referred to in table 1 for ceiling plenum and suspended ceiling absorption.  
5. L<sub>p</sub> values are including a room absorption of 10 dB/Oct.  
6. dB(A), NC and NR index figures are sound pressure levels. Figures less than 20 are indicated by “-”.  
7. Δ<sub>p</sub>s is static pressure drop across VAV air volume control unit with damper fully open.  
8. For non standard applications and/or selections, please contact our technical staff.

Table 1: Assumptions for additional attenuation.

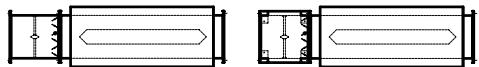

| Hz             | 125 | 250 | 500 | 1000 | 2000 | 4000 |
|----------------|-----|-----|-----|------|------|------|
| Discharge (dB) | 5   | 10  | 20  | 30   | 30   | 25   |
| Radiated (dB)  | 2   | 5   | 10  | 15   | 15   | 20   |
